AIRWAY FOCUSED EARLY ORTHODONTIC TREATMENT

- 1. Mouth breathing can cause a constriction of the maxillary arch. T F
- 2. When the lower jaw is moved forward with functional appliances in a younger patient, TM dysfunction may be prevented, as well as snoring and sleep apnea. T F
- 3. Functional appliances can be used to expand arches, advance anteriors, distalize molars, and advance the mandible. T F
- 4. An indication for arch expansion is that there is no room for the lateral incisors. T F
- 5. When the maxillary arch is expanded, this functions to open the airway and some patients report that they can breathe better. T F

TO RECEIVE 1 HOUR OF CONTINUING EDUCATION, PLEASE COMPLETE THE TEST SCAN AND EMAIL TO LEE@RONDEAUSEMINARS.COM.
